## Think it Through

1. Why do you think on some of the issues, the Undecided voting results were high? What do these results say about the students' perspectives?
2. How would *you* vote on these issues compared with these Gen Z students? What factors (cultural, societal, or otherwise) might influence this generation's opinions?
3. How can students get involved in the political process, even if they are not old enough to vote?
